Rainfall vs. Crop Yields: A Regional Productivity Analysis

State Name

- Andhra Pradesh
- Assam
- Bihar
- Gujarat
- Haryana
- Himachal Pradesh
- Jharkhand
- Karnataka

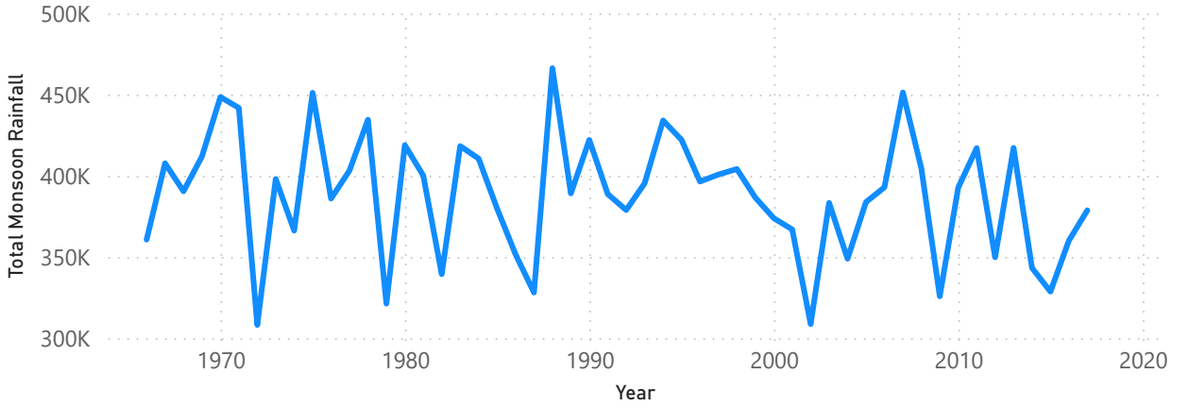

Year

1966	1967	1968
1969	1970	1971
1972	1973	1974

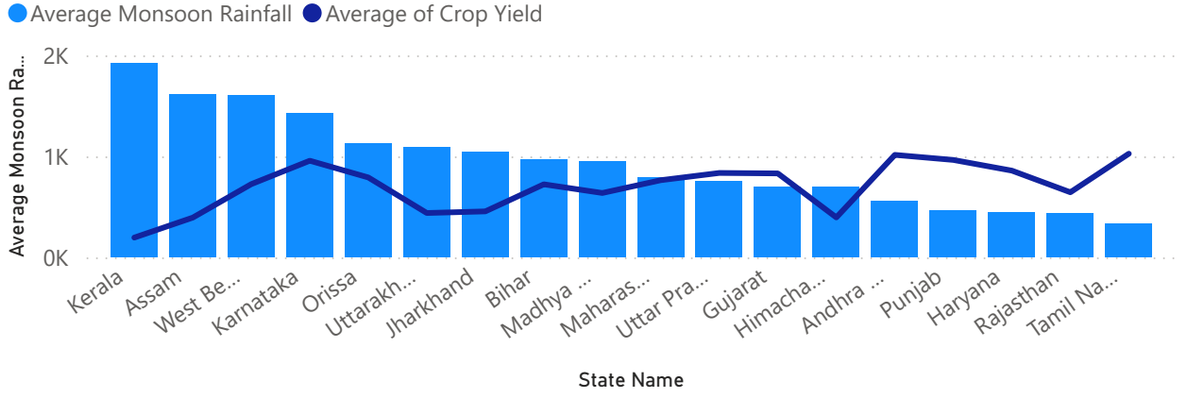

Crop Type

- BARLEY
- CASTOR
- CHICKPEA
- COTTON
- FINGER MILLET
- GROUNDNUT
- KHARIF SORGH...
- LINSEED

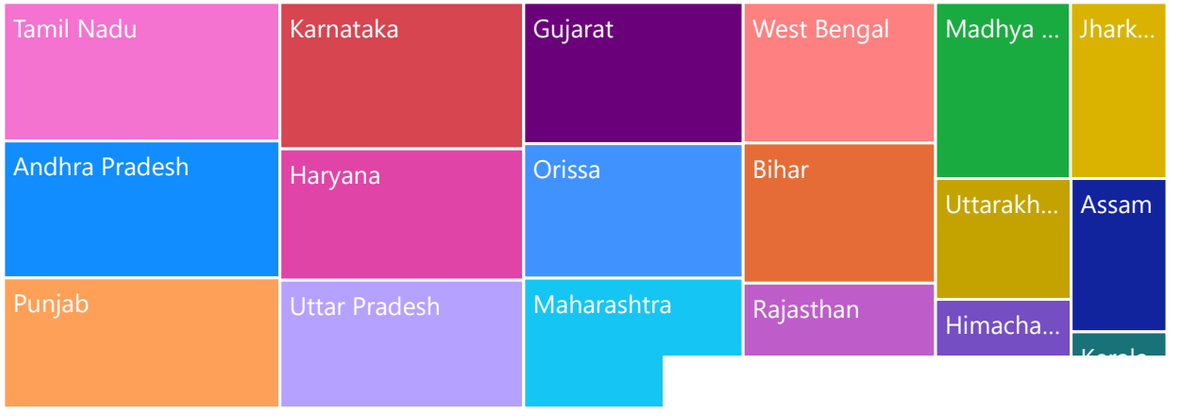

Total Monsoon Rainfall by Year

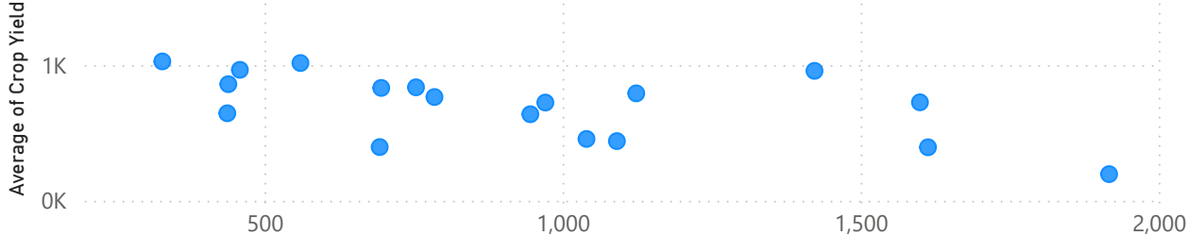

Average Monsoon Rainfall and Average of Crop Yield by State Name

Average of Crop Yield by State Name

Average Monsoon Rainfall and Average of Crop Yield by State Name

Project Summary & Insights

Findings :

- **Rainfall is unpredictable:** The timeline shows that monsoon rainfall jumps around a lot from year to year, making it hard for farmers to plan.
- **More rain = higher yield:** The scatter plot shows a pretty clear link. States that get more rainfall generally see much better rice yields.
- **Big differences by state:** As seen in the treemap, some regions produce way more than others. This mostly comes down to how much water they naturally get.
